### University of Asia Pacific Department of Civil Engineering Final Examination Fall 2014 Program: B.Sc. Engineering (Civil)

Course Title: Professional Practices and Communication

Time: 2 Hour

Course Code: CE 403

Full Marks: 50

#### Answer all questions.

1	Read the following passage and give answer with explanation from Engineering 10
	ethical point of view:
	Engineer A, a renowned structural engineer, is hired for a nominal sum by a large city
	newspaper to visit the site of a state bridge construction project, which has had a troubled
	history of construction delays, cost increases, and litigation primarily as a result of several well-
	publicized, on-site accidents. Recently the state highway department has announced the date for
	the opening of the bridge. State engineers have been proceeding with repairs based upon a
	specific schedule. Engineer A visits the bridge and performs a one-day visual observation. Her
	report identifies, in very general terms, potential problems and proposes additional testing and
	other possible engineering solutions.

Thereafter, in a series of feature articles based upon information collected from Engineer A's report, the newspaper alleges that the bridge has major safety problems that jeopardize its successful completion date. Allegations of misconduct and incompetence are made against the project engineers and the contractors as well as the state highway department. During an investigation by the state, Engineer A states that her report was intended merely to identify what she viewed were potential problems with the safety of the bridge and was not intended to be conclusive as to the safety of the bridge.

Was it ethical for Engineer A to agree to perform an investigation for the newspaper in the manner stated?

2(a)	What is meant by Dispute? Describe the most common causes of dispute in construction contract.	1+2
(b)	Mention the names of the methods (at least 4) of dispute resolution.	2
(c)	When Negotiation is a better option for resolving dispute? Briefly describe the method of Negotiation.	2+3
3(a)	What is arbitration? Briefly describe the process of arbitration	1+2
(b)	What are the merits and demerits of arbitration?	2
(c)	What is Litigation? When can this method be applied?	1+2
(d)	Write down the disadvantages of litigation.	2
4(a)	What are the common components of a thesis?	2
(b)	What are the criteria of a good abstract? What should be avoided in abstract writing?	2+2
(c)	Describe the points to be considered for a good Title of a proposal/thesis	4
5(a)	Describe the 4 characteristics of a good procurement process.	2
(b)	Describe the Technical and Financial Evaluation of Bidder Selection Criteria.	2.5
(c)	Mention the 5 basic processes of Bid Management	2
(d)	What information is typically collected for pre-qualification?	2
(e)	What is meant by Winners curse and Lowball bids? Please Explain.	1.5

#### University of Asia Pacific Department of Civil Engineering Final Examination Fall 2014

Program: B.Sc. Engineering (Civil)

Course No: CE 415 Time: 2.0 hours Course Title: Structural Engineering V
Full Marks: 100

There are **five** questions. Answer any **four** questions. The figures in the right margin indicate the **marks** of the questions. Assume value for any missing data.

- 1. (a) Make a preliminary design for section of a prestressed-concrete beam to resist a total moment of 420 KN-m including girder self weight moment 115 kN-m. Assume a trial depth of the section is  $42\sqrt{(M_T)}$  in mm (where  $M_T$  is in kN-m). The effective prestress for steel is 750 MPa, and allowable stress for concrete under working load is 12 MPa.
  - (b) A symmetric I-shaped beam is prestresssed with  $A_{ps}$ =2189 mm<sup>2</sup> as prestressing steel with an effective stress  $f_{se}$  of 1100 MPa. The c.g.s. of the strands is 115 mm above from the bottom of the beam. Determine the ultimate moment of the section in **Figure: 1** using strain compatibility method.

(Given:  $f'_c = 48$  MPa and  $\beta_i = 0.7$ , Start trial of 'c' value with 250 mm)

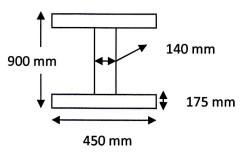

Figure: 1

- 2. (a) Show the stress distributions in a prestressed concrete beam section for different locations (10) of compressive force (C) according to elastic theory.
  - (b) Fourteen steel wires of 9 mm diameter with anchorages are used for prestressing of a 15m pretensioned beam. The beam has symmetrical I-section shown in **Figure: 1.** Determine the position for the c.g.s. line. [Given:  $f_o$ =860MPa,  $f_{se}$ =750 MPa,  $f_b$ =3 MPa,  $f_i$ =3 MPa,  $f_i$ =75 kN-m,  $f_i$ =270 kN-m at midspan].
- 3. A section of simply supported composite beam is shown in **Figure: 2.** The precast stem is prestressed with an effective force of 400 kips assuming a total loss as 15%. Compute the stresses in the section at different stage of loading and also draw the stress distribution at these stages if the bending moment at the section are as follows:
  - Due to precast stem = 250 k-ft
  - Due to top slab = 80 k-ft
  - Due to live load = 400 k-ft

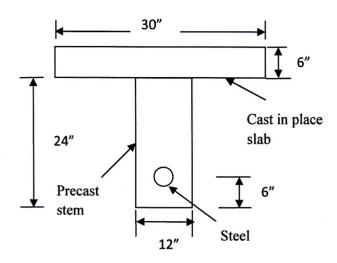

Figure: 2

4. (a) Check the shear strength for the beam shown in **Figure: 3** at section 1-1 which is 3 m from support. Given that this section is adequate for  $w_u = 70 \text{ kN/m}$  on the basis of its flexural strength. ( **Given:**  $f'_c = 40 \text{ MPa}$ ,  $f_{se} = 1100 \text{ MPa}$ ,  $f_{ps} = 1760 \text{ mm}^2$ )

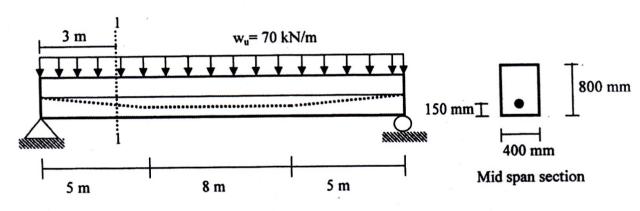

Figure: 3

- (b) What are the advantages and disadvantages of partial prestressing? Define "transfer length" (4+2+4) and write down the parameters which affect the length of transfer for prestressing steel of pretensioned member.
- (a) Calculate the mid-span deflection of a 16 m span I-beam as shown in Figure: 4
  (i) Immediately at transfer of prestress and (ii) after 12 years.

  The beam carries a superimposed dead load of 4 kN/m and service load of 6 kN/m in addition to its self weight. It has to carry a concentrated live load of 75 kN at midspan.

  Assume that, superimposed dead loads are applied soon after prestress trafinsfer.

  Given: A<sub>ps</sub> = 1760 mm², A<sub>c</sub> = 240000 mm², I=2.408×10<sup>10</sup> mm⁴, f<sub>i</sub>=1300 MPa, f<sub>se</sub>= 1120 MPa, E<sub>c</sub>=27400 MPa, C<sub>c</sub>=2.3,γ<sub>con</sub>=24 kN/m³

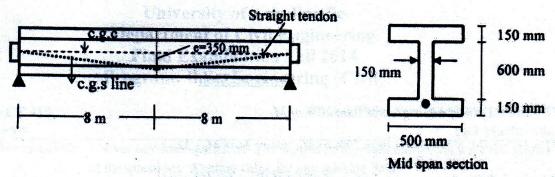

Figure: 4

(b) Draw the load deflection curve of a prestressed beam.

(5)

#### Formulae Sheet

- \* $F = M_T/(0.65h)$ , if  $M_G$  is greater than 20% of  $M_T$
- \* $F = M_L/(0.5h)$ , if  $M_G$  is less than 20% of  $M_T$ , where  $M_L = M_T M_G$

$$*A_c = A_{ps}f_{se}/0.5f_c$$
  $*\varepsilon_{pu} = \varepsilon_{pu} + \varepsilon_{ce} + \varepsilon_{ct} = (f_{se}/E_s) + (f_c/E_c) + [\varepsilon_{pu}\{(d-c)/c\}]$ 

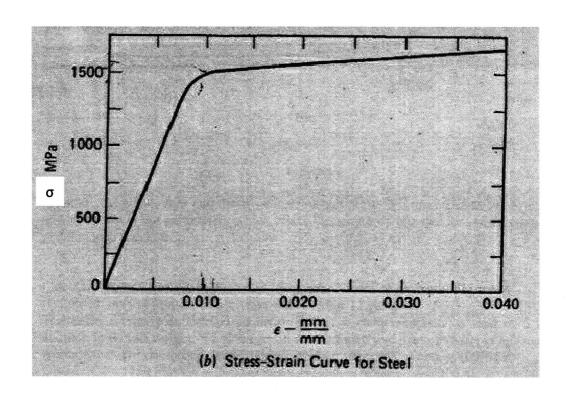

$$*K = r^2/c$$
  $*M_l = f_b A_c k_t$ 

\*
$$F = -(F/A) \pm (Fey/I) \pm (My/I)$$
 \* $V_{ci} = 0.05\sqrt{f'c} b_w d + V_d + V_i M_{cr}/M_{max}$ 

\* 
$$M_{cr} = (I/y_b) (0.5\sqrt{f'c} + f_{pe} - f_d)$$
 \*  $f_{pe} = (F/A) + (Fey_b/I)$  \*  $a_1 = M_T/F$  \*  $a_2 = M_G/F_o$ 

$$*e_t = f_b I / Fc_b * e_b = f_t I / F_o c_t$$

- \* $\Delta_p$  in a simply supported beam =(5wl<sup>4</sup>/384EI)
- \*  $\Delta_w$  in a simply supported beam =(5wl<sup>4</sup>/384EI)
- \*  $\Delta_m$  in a simply supported beam = $(Ml^2/8EI)$
- \*  $\Delta_{pl}$  in a simply supported beam =( $Pl^3/48EI$ )

## University of Asia Pacific Department of Civil Engineering Final Examination Fall 2014 Program: B.Sc. Engineering (Civil)

Course Title: Structural Analysis and Design VI

Time: 2 Hours

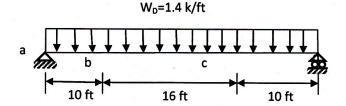

Course Code: CE417 Full Marks: 120

#### Section- A: Answer any 3 (Three) of the following 4 (Four) questions

1. (a) Write short notes on the following:

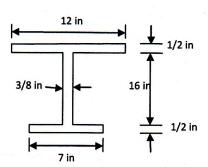

(04)

- i. Stiffened and Unstiffened elements
- ii. Elastic and plastic section modulus
- (b) The beam shown in the following figure has lateral support at locations a, b, c and d. Compute C<sub>b</sub> for segment b-c. Use the unfactored service load as shown.

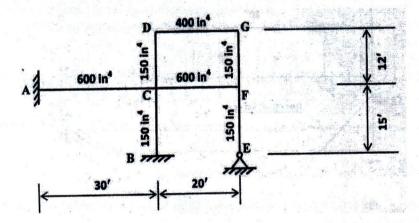

2. (a) Write short notes on compact and non-compact section.

- (04)
- (b) Compute the following for the cross section shown in figure below. Assume A 992, 50 Grade steel.
  - i. Yield moment
  - ii. Plastic moment
  - iii. Shape factor

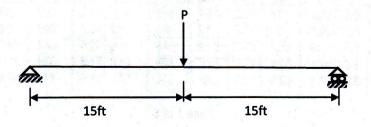

Page 1 of 6

- 3. (a) Discuss residual stress including its effects. (05)
  - (b) Define effective length factor. Calculate effective length factors for column BC, EF, CD and FG shown in the following figure. Moment of inertia of columns and beams are shown in figure. (Use Annexure-1).

- 4. (a) State the typical differences between steel and concrete structures. (04)
  - (b) The beam shown in the following figure is a W 10×77 and is laterally unsupported except at ends. If F<sub>y</sub>=50 ksi, Calculate the maximum permissible value of P. Neglect self-weight of the beam and follow ASD principle. For this beam C<sub>b</sub>=1.32. (Use Annexure-2).

Page 2 of 6

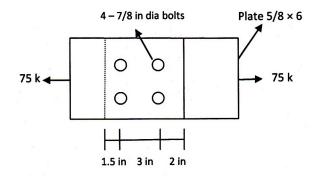

#### Section-B: Answer any 3 (Three) of the following 4 (Four) questions

- 5. (a) What is meant by  $C_b$  and  $L_c$ ? (04)
  - (b) Calculate the allowable strength (in ASD) of a W 14 × 90 column section with a strong axis unbraced length of 30 ft and weak axis unbraced length of 15 ft.

    Assume ends of unbraced lengths as pinned. The materials is ASTM A 992 (Fy=50 ksi and Fu=65 ksi). Annexure 3 is provided to facilitate the design.
- 6. (a) Draw a column strength curve and indicate regions of short, intermediate and long column. How does failure of short column differ from that of long column? (05)
  - (b) Use ASD method to select lightest section of A 36 steel for a 20 feet long column to carry an axial load of 170 kip. Assume Fixed-Pinned ends of 20 ft long column in both axes. Probable column sizes with sectional properties are given below.

Size	$A_g (in^2)$	r <sub>x</sub> (in)	r <sub>y</sub> (in)
W 10×39	11.5	4.27	1.98
W 10×45	13.3	4.30	2.01
W 12×40	11.8	5.13	1.93

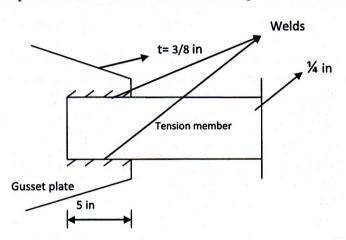

- 7. (a) What do you understand by shear lag? Describe with figures. (04)
  - (b) Investigate the adequacy of the connection if the total load applied is 75 k as shown in the figure. It includes 4 -7/8 dia A 325 bolts in standard hole bearing type connection with threads excluded from shear plate. Assume A 572 Grade 50 steel.

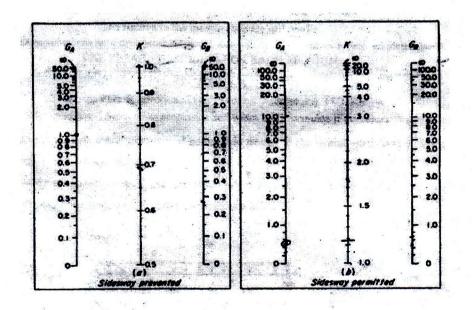

Page 3 of 6

(15)

(b) The following figure shows a flat bar used as a tension member and connected to a gusset plate. The welds are 3/16 in fillet weld made of E 70 XX electrode. The connected parts are A 992 steel. Determine the strength of the connection.

Annexure- 1

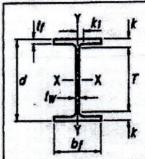

Nomograph for effective length of columns.

#### Annexure- 2

### University of Asia Pacific Department of Civil Engineering Final Examination Fall 2014

Program: B.Sc. Engineering (Civil)

Course Title: Structural Engineering IX (Earthquake Resistant Design and Retrofitting)

Time: 2 Hours Full Marks: 100

#### There are 7 (Seven) questions. Answer any 5 (Five)

- 1. a) Define undamped, critically damped and overdamped systems. Derive equation (11) of motion of free vibration of an underdamped SDOF system.
  - b) The free vibration of an undamped system is shown below in *Figure 1*. (9) Calculate its (i) undamped natural period, (ii) undamped natural frequency in Hz and radian/second, (iii) stiffness if its mass is 2 lb-sec<sup>2</sup>/ft.

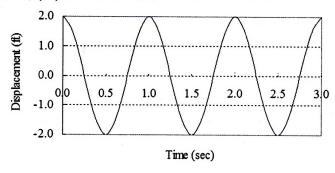

Figure 1

2. a) What are the effects of soil condition on isolated structure?

(3)

Course Code: CE 423

b) A 16 in wide and 20 in deep (including 5 in slab) reinforced concrete beam spans between two interior columns (*Figure 2*) in a building frame designed for a region of high seismic risk.

The clear span of the beam is 22 ft and the reinforcement at the face of the support consists of four No. 9 top bars and four No. 8 bottom bars, each in one layer.

Design the shear reinforcement for the regions adjacent to the column faces for DL = 1.2 kip/ft and LL = 1.4 kip/ft. Given  $f'_c = 3000 \text{ psi}$  and  $f_y = 60000 \text{ psi}$ .

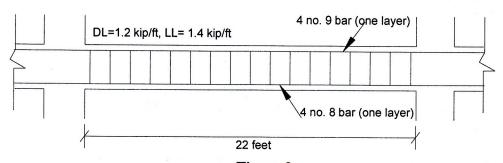

Figure 2

- (c) Explain how degree of confinement effects the nominal shear capacity of beam-**(5)** column joints. 3. What is seismic base isolation system? What are the characteristics of a well-**(8)** a) designed seismic base isolation system? Write short notes on: (i) Resonance, (ii) Spherical sliding bearing. (6) b) What is liquefaction? Explain how it takes place during earthquake. **(6)** c) 4. Write short notes on: (i) Anchorage, (ii) Development length. **(6)** a) What are the requirements for concrete and steel reinforcement for earthquake **(4)** b) resistant design? Determine the minimum transverse reinforcement (10)of the column (*Figure 3*) required over length  $l_0$ . Show the reinforcement detailing in neat sketch. Column Size 36 in x 36 in 2 (a) (b) Figure 3 5. a) What assumptions are made in calculating the flexural resistance of a section (8)strengthened with an externally applied FRP system? b) What are the failure modes of FRP strengthened flexural member as per ACI. **(5)**
- "Confinement of circular column is better than confinement in rectangular c) **(4)** column", Explain why? Explain how concrete surface should be prepared before retrofitting. d) **(3)** What are the main causes of deterioration of RC structures in Bangladesh? 6. a) (12)Discuss the problems that occur commonly during RC construction works in Bangladesh. b) Explain concrete crack sealing by injection method. **(4)**

c) Explain possible reasons for the cracks in RC beams and columns shown in *Figure 4*.

**(4)** 

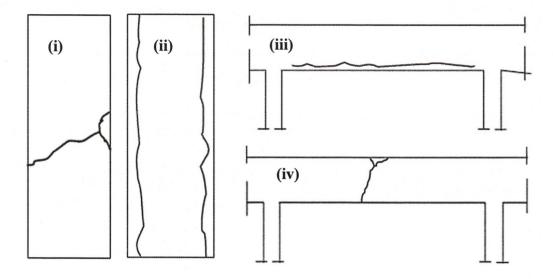

Figure 4

- 7. a) Why unreinforced masonry (URM) structures are vulnerable to earthquake? (8) What steps should an engineer take to avoid failure of URM structures due to earthquake?
  - b) Write short notes on: (i) Primer, (ii) Adhesive, (iii) FRP (6)
  - c) Narrate the repair methods of the cracks shown in the brick walls in *Figure 5*. (6)

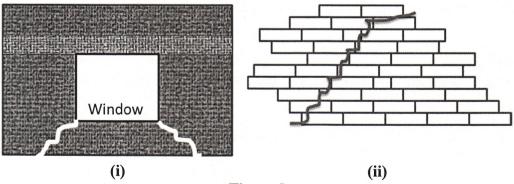

Figure 5

#### University of Asia Pacific Department of Civil Engineering **Final Examination Fall 2014** Program: B. Sc. Engineering (Civil)

Course Title: Environmental Engineering III

	se Title: Environmental Engineering III 2 hours	Course Code: CE 4 Full marks:	
Que	estion no. 6 is mandatory. Answer any FOUR (4) from question no. (Assume any missing data)	1-5. (5 X 20 = 100	))
1.	(a) Define a hazardous waste emphasizing its characteristics.		[5]
	(b) Show in a schematic diagram/flowchart, the different ways that exposed to hazardous waste.	humans can be	[5]
	(c) Consider you are an Engineer who works for an industry in Barr of toxic chemicals waste to dispose of as part of the manufacturing established in a developing country, list the general problems that y treatment and disposal of this special category of waste. Also state you choose for disposal of this waste? Lastly, as part of your assign factors that you would have to consider if the company asks you to this type of waste?	process. Being you will expect in the what option would ament, what are the cite a landfill site for	ne
2.	(a) What are the advantages and the challenges of composting proc	ess?	[6]
	(b) How is the anaerobic digestion process that occurs inside a digedifferent than the anaerobic digestion when it occurs inside a landfat least three organizations that have implemented biogas technologically.	II? State the names	of
	(c) Estimate the theoretical requirement of air for composting of the the structural formula $C_{40}H_{100}O_{30}N$ .		ing [8]
3.	(a) Why is transfer station important in solid waste management sys	tem?	[5]
	(b) Which steps/elements are included in the consideration of economists collection?	omic costs of the so	olid [ <b>5</b> ]
	(c) A transfer station was built with an installation cost of 5,00,000 operational cost being 50,000 BDT. The transfer station is meant to operating 7 days a week. To be operated to and from the transfer station was bought with 1,00,000 BDT which will require 10,000 BDT for	o handle 500 tons/dation, a tractor-traile	or

maintenance. The truck carries 50 tons/trip. A driver appointed would require 4,000 BDT

per month including benefits. The capital cost of the building and transfer trucks are to be amortized over a 20 year period using a 10% discount factor. Suppose it takes 45 minutes to make a one-way trip from the transfer station to the disposal site and 5 round trips per day are made. Find the total cost of transfer station and hauling cost in BDT per ton. Plot the result showing the fixed cost and the variable cost varying over time.

- 4. (a) What is industrial waste? Provide examples of industrial waste and explain how these wastes can be treated?
  - (b) Distinguish between Resource Recovery by Material Separation and Resource Recovery by Material Conversion. [4]
  - (c) A tannery in Hazaribagh dumps waste every day @ a rate of 50 tons per day into a nearby river except Friday. Also, there is no waste collection system available in the surrounding residential area that generates 0.1 tons per capita per day with 1500 people and the ultimate destination for these waste alse is the same river beside tannery. If a waste collection vehicle to be bought for collecting the residential waste costs 50,000 BDT requiring 2 crew members with 10 BDT/hour wage rate @8 working hours/day for 7 days a week, calculate the cost of the total waste collection system for one year (no amortization required; consider yearly operational cost to be 5,000 BDT) if it is to be implemented in the area. Also calculate the total amount of waste that the river is receiving every month when there is no collection system available.
- 5. (a) What is leachate and what is it composed of? How can leachate be controlled? What are the key components of leachate management? [3+3 = 6]
  - (b) Draw the landfill gas generation profiles.
  - (c) A refuse has the following components and bulk densities: [8]

[6]

Component	Percentage by Weight	Uncompacted bulk density (lb/ft <sup>3</sup> )
Newspaper	40	3.81
Garden waste	35	4.45
Glass	25	18.45

Assume that the compaction in the landfill is 44 lb/ft<sup>3</sup>. Estimate the % volume reduction achieved during compaction of the waste. Estimate the overall uncompacted bulk density if the garden waste is removed.

(b) Design a sanitary landfill that will be built in a flat area which will be used ultimately for construction purpose after 20 years i.e. the land is being taken through lease by the Govt. Answer according to the steps given below:

[17]

- i) State the general steps or factors that you will consider while selecting the area
- ii) Choose the type of method of landfilling
- iii) Mention a leachate management system
- iv) State the advantages/disadvantages of the site that you chose and the method that you selected for the area
- v) Calculate the required landfill capacity for the current year for a population size of 30,00,000 with per capita waste generation rate of 5.0 lb/capita/day and compacted density of 40 lb/ft<sup>3</sup>. Assume that the daily cover consists of 10% of the landfill volume.
- vi) State how you can make the landfill environmentally friendly

#### Given Formulae:

$$C_n H_a O_b N_c + (n+a/4-b/2-3c/4) O_2 \rightarrow nCO_2 + (a/2-3c/2) H_2O + cNH_3$$

$$NH_3 + 2O_2 \rightarrow H_2 O + HNO_3$$

$$A = P\left[\frac{i(1+i)^n}{(1+i)^n-1}\right]$$

$$CRF = \left[\frac{i(1+i)^n}{(1+i)^n-1}\right]$$

Where, A = Annual cost (BDT/yr)

P = Purchase price, (BDT)

i = interest rate, discount rate (yr<sup>-1</sup>)

n = amortization period (yr)

CRF = Capital Recovery factor

Time: 2 hour

Full marks: 100 (= 4×25)

#### [ANSWER ALL PARTS (i.e. a, b) OF EACH QUESTION TOGETHER]

(Note: Assume reasonable value for any missing data) (The symbols have their usual meaning) Answer any FOUR questions out of FIVE. 1. On March, 4, 2015, the following air quality data have been recorded at CAMS (Continuous (10) Monitoring Stations/Systems) in Dhaka.  $PM_{2.5} = 150 \mu g/m^3 (24 hr)$  $PM_{10} = 180 \mu g/m^3 (24 hr)$  $O_3 = 0.200 \text{ ppm } (1 \text{ hr})$ Calculate Air Quality Index (AQI) for that day. Also, prepare the AQI report. Briefly explain – (i) Criteria pollutant, (ii) Air toxin, (iii) Lofting plume, (iv) Fumigating (15) plume and (v) Fanning Plume 2. A stack emitting 70 g/s of SO<sub>2</sub> has an effective stack height of 200 m. The wind speed is 3 m/s at 10 m, and it is a cloudy summer day. Estimate the ground level SO<sub>2</sub> concentration -(i) directly downwind at a distance of 1.5 km (ii) at a point located 1.5 km downwind and 0.5 km of cross-downwind axis (iii) at a point downwind where SO<sub>2</sub> is maximum (b) (i) Briefly describe the approaches for engineering control of air pollutants. (6) (ii) Explain the effects of air-fuel ratio on pollution with relevant figure. (7) A lake of 150×10<sup>4</sup> m<sup>2</sup> area is being fed by a stream flow of 10 m<sup>3</sup>/s. Phosphorus (P) (10) 3. (a) concentration in the stream water is 0.0004 g/m<sup>3</sup>. The lake also receives a wastewater flow of 0.5 m<sup>3</sup>/s, which contain 11.0 mg/L (= 11.0 g/m<sup>3</sup>) of phosphorus. P settling rate is given by  $10 \text{ m/yr} (= 3.17 \times 10^{-7} \text{ m/s}).$ (i) Estimate average P concentration in the lake. (ii) Estimate P removal rate at the treatment plant to keep P concentration below 0.02 mg/L. (i) What is eutrophication? Briefly explain the classification of lakes from the viewpoint of (6) eutrophication. (ii) Briefly describe the layers in a lake due to availability of sunlight, with necessary figure. (4) (iii) What are the principal controlling factors for eutrophication? (5)

- 4. (a) A city discharges 1500 m³/d of sewage into a stream whose minimum rate of flow is 5.0 (12) m³/s. The velocity of stream is 5 m/s. The temperature of the sewage is 20°C and that of the water stream is 15°C. The 20°C BOD<sub>5</sub> of the sewage is 190 mg/L and that of the stream water is 1 mg/L. The sewage contains no DO while the stream is 90% saturated with dissolved oxygen. The values of K<sub>d</sub> and K<sub>r</sub> at 20°C are 0.25/d and 0.65/d respectively. Use the temperature coefficient of 1.047 for K<sub>d</sub> and 1.024 for K<sub>r</sub>. Determine:

  (i) The maximum oxygen deficit, critical (minimum) DO and its location.
  - (ii) Sketch the DO profile for a 150-km reach of the stream below the discharge. Attach the graph paper with your answer script.
  - (b) (i) What are the source and sink of DO in river to be considered for Streeter-Phelps DO (5) model? Also mention the assumptions to be made for the model.
    - (ii) What are the drawbacks of Streeter-Phelps oxygen-sag curve? (3)
    - (iii) Explain the effects of (i) temperature and (ii) NBOD on DO sag curve with relevant (5) figures.
- 5. (a) Briefly explain the effects of oxygen demanding waste on river water quality. (3)
  - 30 mL wastewater is mixed with dilution water to fill 300 mL BOD bottle. The drop of DO after 5 days is 4.8 mg/L. For a BOD bottle filled with only dilution water, DO drop is 1.2 mg/L after 5 days. If  $k = 0.21 \, d^{-1}$  at 20°C, what is the CBOD remaining after 5 days? Again, the total concentration of organic and ammonia nitrogen in the wastewater is 25.0 mg/L. Estimate the ultimate strength of the sample.
  - (b) What are the problems associated with eutrophication? Explain the mechanisms of (8) eutrophication control.

Explain why river water quality becomes worse during summer months. (4)

#### Formulae:

$$I_{P} = \frac{I_{Hi} - I_{Lo}}{BP_{Hi} - BP_{Lo}} (C_{P} - BP_{Lo}) + I_{Lo}$$

$$\sigma_y = ax^{0.894}, \quad \sigma_z = cx^d + f$$

$$C(x, y, z) = \frac{Q}{2\pi u \sigma_y \sigma_z} \times \exp\left(\frac{-y^2}{2\sigma_y^2}\right) \left[ \exp\left(-\frac{(z-H)^2}{2\sigma_z^2}\right) + \exp\left(-\frac{(z+H)^2}{2\sigma_z^2}\right) \right]$$

$$C_{\text{max}} = \frac{Q}{u} \times \frac{C_u}{Q_{\text{max}}}$$

$$BOD_t = L_0 (1 - e^{-kt})$$

$$P = \frac{S}{Q + v_s \cdot A}$$

$$D = \frac{k_d L_0}{k_r - k_d} \left( e^{-k_d t} - e^{-k_r t} \right) + D_0 e^{-k_r t}$$

$$k_r = \frac{3.9u^{1/2}}{H^{3/2}} \qquad t_c = \frac{1}{k_r - k_d} \ln \left[ \frac{k_r}{k_d} \left( 1 - \frac{D_0[k_r - k_d]}{k_d \cdot L_0} \right) \right]$$

$$D_{\text{max}} = \frac{k_d L_0}{k_r - k_d} \left( e^{-k_d t_c} - e^{-k_r t_c} \right) + D_0 e^{-k_r t_c}$$

$$DO_{(sat)} = 14.62 - 0.39 \text{ T} + 0.007714 \text{ T}^2 - 0.0000646 \text{ T}^3$$

$$k_{\text{d (at T^{\circ}C)}} = k_{20^{\circ}\text{C}} \; . \; (1.047)^{\text{T-20}}, \; \; k_{\text{r (at T^{\circ}C)}} = k_{\text{r20^{\circ}C}} \; . \; (1.024)^{\text{T-20}}$$

$$BOD_m \cdot V_m = BOD_w \cdot V_w + BOD_d \cdot V_d$$

<sup>\*</sup>Surface wind speed is measured at 10 m above the ground.

TABLE 7.7 WIND PROFILE EXPONENT p FOR ROUGH TERRAIN\*

Stability class	Description	Exponent, p
but CO	Very unstable	0.15
1 6	Moderately unstable	0.15
Neubal ID	Slightly unstable	0.20
D	Neutral	0.25
wanst < IF	Slightly stable	0.40
	Stable	0.60

<sup>&</sup>quot; For smooth terrain, multiply p by 0.6; see Table 7.8 for further descriptions of the stability classifications used

<sup>(</sup>ii)  $NO_2$  has no short term air quality standard and can generate an AQI only above 200

<sup>\*\*</sup>Corresponds to clear summer day with sun higher than 60° above the horizon.

<sup>\*</sup>Corresponds to a summer day with a few broken clouds, of a clear day with sun 35-60° above the horizon.

Corresponds to a fall afternoon, or a cloudy summer day, or clear summer day with the sun 15-35° above the horizon.

<sup>\*</sup>Cloudiness is defined as the fraction of sky covered my clouds.

For A-B, B-C, or C-D conditions, average the values obtained for each.

Note: A, Very unstable; B, moderately unstable; C, slightly unstable; D, neutral; E, slightly stable; F, stable. Regardless of windspeed, class D should be assumed for overcast conditions, day or night. Source: Turner (1970).

<sup>&</sup>lt;sup>c</sup> The computed values of  $\sigma$  will be in meters when x is given in kilometers. Source: Martin (1976).

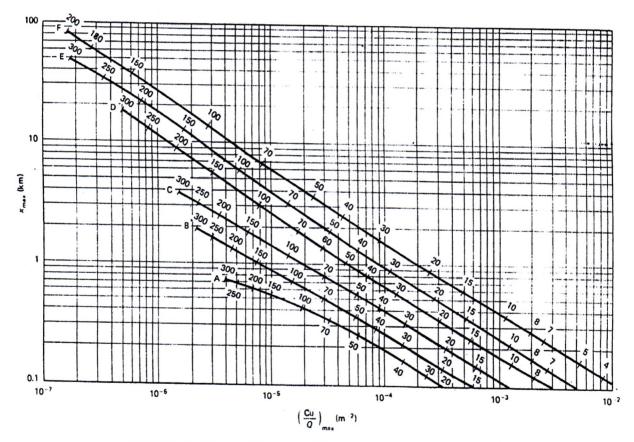

Figure 7.30 To determine the peak downwind plume concentration, enter the graph at the appropriate stability classification and effective stack height (numbers above the lines, in meters) and then move across to find the distance to the peak, and down, to find a parameter from which the peak concentration can be found (Turner, 1970).

### University of Asia Pacific

#### Department of Civil Science and Engineering Semester Final Examination, Fall-2014

Program: B.SC Engineering (2<sup>nd</sup> Year/2<sup>nd</sup> Semester)

Course Title: Principle of Economics

Course Code: ECN 201

Credit: 2.00

Time: 2 Hours

Full Marks: 50

Answer any <u>five</u> from the following questions:

1. (a) What are the features of monopoly? Explain deadweight loss with a diagram.

(b) In case of a monopolist: P= 200-4Q, TC= 5Q+4

Find out the profit maximizing price and quantity.

2. (a) Calculate Nominal GDP, Real GDP, GDP Deflator: Here, Base Year = 2010

(6)

			,			

Year	Price of X	Quantity of X	Price of Y	Quantity of Y
2010	240	25	210	30
2013	265	30	300	36
			7 1 1	

i. Estimate the Nominal GDP for 2010 and 2013. ii. What is the Real GDP in 2013? iii. Find the GDP deflator for 2013 (b) What are the differences between GDP Deflator and CPI? Define: GDP Deflator. (4) 3. How can economy revive itself after recession? What kind of policies should be taken to (10)tackle the problem of recession? Explain (10)4. What is inflation? Explain the reasons behind inflation 5. (a) Suppose price of a consumer basket of goods in year 2000=160 and in 2010=235. Find the CPI in 2010. What is the inflation rate for 2010? [Base Year= 2000] (5) (b) What are the consequences of inflation? Explain. (5) (10)6. Explain different types of unemployment.

#### The TH

	Example are SIX (6) questions. Answer question no. 01 (COMPULSORY) and any EE (3) from the rest.	
1.	<ul> <li>A) Define the following:</li> <li>Environmental Impact Assessment (EIA)</li> <li>Screening</li> <li>Environmental policy</li> <li>Impact analysis</li> <li>Impact mitigation</li> <li>Environmental management plan</li> <li>EIA review</li> <li>Environmental Auditing</li> </ul>	8
	B) Draw the flow diagram of EIA process and parallel studies.	6
2.	A) According to the Bangladesh Environmental Conservation Rules (1997), write seven factors that should be considered while declaring any area as <i>ecologically critical area</i> .	3
	B) According to Article 7 of the Bangladesh Environmental Conservation Rules (1997), write the procedures to obtain environmental clearance certificate for a red category factory.	6
	C) Explain four main types of social impacts.	3
3.	Write the name of your own group work's project.	
	One of the following projects: a) Rampal Thermal Power Plant b) Padma Multipurpose Bridge Project c) Deep Sea Port in Sonadia	
	A) Identify the three most important impacts of your project. Write only the names.	1
	B) Graphically show the time versus impact significance of these three impacts at different phases of your specific project. Draw three different figures for three selected impacts.	8
	(Examples of different phases of the project are: before the project started, at	

planning/initiation phase, at implementation/construction phase and at operational

4

3

4

C) According to Environmental Conservation Rules (1997) of Bangladesh, in which category the following industrial units and projects can be classified (i.e. Green, Orange A, Orange B, Red)?

Industrial Unit/Project	Category
Tea processing	
Medical and surgical instruments (excluding production)	
Dry-cleaning	
Power plant	

- 4. A) What are the typical parameters (impact characteristics) that need to be taken into account for impact prediction and decision-making in an EIA process?
  - B) Produce an EIA sample impact identification checklist for your own group work's project.

For one of the following projects a) Rampal Thermal Power Plant b) Padma Multipurpose Bridge Project c) Deep Sea Port in Sonadia

- 5. A) Explain the three steps process (or main elements) of impact mitigation.
  - B) A University is proposing to construct a new residential campus in Gazipur in an area covering 100 acres. After completion, the new campus will accommodate around 2500 students, staffs and faculties. There will be two residential halls, where around 800 students will reside. The area proposed for the new campus is located in an area mainly used for agriculture and there is a river nearby.

For this project, write the benefits of public participation during EIA process for the following stakeholder groups (write four benefits for each stakeholder group):

- The proponent/supporter
- The decision-maker
- Affected communities
- 6. A) Elaborately explain six different components of Environmental Management Plan (EMP).
  - B) Explain the main steps of EIA review.
  - C) Graphically show three different steps of Environmental Auditing (EA).
